

HARSHITA JOSHI

Full Stack Developer — AI Automation

hjoshikspuk04@gmail.com — +91 8191895423 — LinkedIn — Portfolio

PROFILE

Computer Science undergraduate and Full Stack Developer specializing in scalable web applications and AI-driven automation systems. Proficient in **React**, **Next.js**, **Node.js**, **Express**, **MongoDB**, **REST APIs**, and **n8n workflow automation**. Experienced in building **RAG systems**, **automated document processing pipelines**, and cloud-deployed applications, with a focus on clean architecture, reliable automation, and practical problem solving.

Technical Skills

Languages: JavaScript (ES6+), Java, HTML5, CSS3

Frontend: React.js, Next.js, Vite, Tailwind CSS, GSAP

Backend: Node.js, Express.js, FastAPI, RESTful APIs, Microservices

Databases: MongoDB, MongoDB Atlas, ChromaDB, Vector Search

AI & Automation: RAG, LLM Integration, Groq API, Embeddings, n8n, Workflow Automation, Webhooks, API Integrations

Tools & Cloud: Git, GitHub, Docker, AWS EC2, Vercel, Render, Postman

Projects

CodeSenseAI — AI-Powered Repository Code Assistant

[\[Live Demo\]](#)

Tech Stack: *React.js, Node.js, Express.js, FastAPI, MongoDB, ChromaDB, Groq API, RAG*

- Built a hybrid repository-aware AI coding assistant supporting both local codebases and GitHub repositories, enabling natural-language exploration of files, dependencies, project structure, and source code.
- Engineered an end-to-end RAG pipeline using ChromaDB for code embeddings and vector search, retrieving relevant repository context to generate accurate, context-aware LLM responses.
- Architected a distributed backend with FastAPI for AI/RAG processing and Node.js/Express for application services, with the frontend, backend, and AI services deployed across Vercel, Render, and AWS EC2.

AI Invoice Intelligence & Automation System

[\[Live Demo\]](#)

Tech Stack: *Next.js, Node.js, MongoDB, n8n, Groq AI, OCR, Webhooks*

- Built an AI-powered invoice processing platform with dual ingestion channels for manual PDF uploads and email-triggered invoices, providing a unified automated processing pipeline.
- Developed n8n workflows integrating webhooks, email attachments, PDF extraction, OCR, Groq AI, and MongoDB to automate invoice classification, data extraction, validation, and storage.
- Implemented duplicate invoice detection, structured financial-data validation, processing-status tracking, and automated email notifications for flagged invoices and workflow outcomes.

AI Logistics Agent

[\[Live Demo\]](#)

Tech Stack: *React, Express.js, Node.js, MongoDB, n8n, Groq AI*

- Developed a real-time logistics dashboard for monitoring fleet vehicle anomalies, tracking operational events, and managing exception-handling workflows.
- Built RESTful APIs with Express.js and MongoDB to manage vehicle data, telematics events, and logistics exception records.
- Integrated n8n workflow automation with AI-based exception analysis and fallback logic to automate incident handling and trigger driver notifications and operational alerts.
- Designed an event-driven workflow that connects the React dashboard, backend services, MongoDB, n8n, and AI processing for automated logistics exception management.

Achievements

2nd Place — NASA Astro Hackathon

2025

- Collaborated with a team to develop a winning software solution for a real-world aerospace data processing challenge during a 24-hour hackathon.
- Worked under a strict deadline to design, develop, and present the solution as part of a competitive team-based hackathon.
- Contributed to the technical implementation and problem-solving process throughout the development of the project.

Education

Bachelor of Technology (B.Tech.) in Computer Science

Expected Graduation: 2027

Birla Institute of Applied Sciences
