

HARSHITA JOSHI

Full Stack Developer (MERN) | AI & GenAI Enthusiast | Computer Science Undergraduate

hjoshikspuk04@gmail.com | 8191895423 | [Linkedin](#) | [Portfolio](#)

PROFILE

Motivated Computer Science undergraduate (B.Tech, 4th Year) with hands-on experience building full-stack web applications using the MERN stack and AI-powered applications. Experienced in developing REST APIs, authentication systems, database-driven applications, third-party API integrations, workflow automation, and AI/RAG-based developer tools. Built projects involving repository-aware AI code analysis, vector databases, LLM integration, workflow automation, speech-to-text, and automated content generation.

TECHNICAL SKILLS

Languages: JavaScript, HTML5, CSS3, Java

Frontend: React.js, GSAP, State Management, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, REST APIs

Databases: MongoDB, MongoDB Atlas, ChromaDB

AI & GenAI: RAG (Retrieval-Augmented Generation), LLM Integration, Groq API, Embeddings, Vector Search, Prompt Engineering

Automation & Integrations: n8n, Make.com, Cloudinary

Developer Tools & Platforms: Git, GitHub, VS Code

Cloud & Deployment: AWS EC2, Vercel, Render

Core Concepts: Authentication & Authorization, API Integration

Currently Learning: Next.js, Advanced Generative AI

PROJECTS

CodeSenseAI — AI-Powered Repository Code Assistant | *React.js, Node.js, Express.js, FastAPI, MongoDB, ChromaDB, Groq API, RAG*

[Live](#)

- Built a hybrid repository-aware AI developer assistant supporting both local codebases and GitHub repositories for natural-language exploration of files, structure, dependencies, and code logic.
- Implemented a RAG-based architecture with ChromaDB as the vector database to retrieve relevant repository context before generating AI responses, improving accuracy and relevance.
- Built a unified ingestion pipeline that scans repository files, processes code content, generates embeddings, and stores searchable representations in ChromaDB.
- Built a separate FastAPI AI service to handle RAG-related processing while the Node.js/Express backend managed application logic and APIs; used MongoDB for application data management.
- Deployment: React frontend on Vercel, Node.js/Express backend on Render, and AI/FastAPI service on AWS EC2; used Git/GitHub for version control.
-

Portfolio Website | *React.js, GSAP, CSS*

[Live](#)

- Designed and developed a personal portfolio website using React.js to showcase projects, technical skills, achievements, and experience.
- Implemented smooth, interactive animations using GSAP; built a fully responsive interface with reusable React components, optimized for mobile, tablet, and desktop.
- Deployed the production website using Vercel.

EDUCATION

Bachelor of Technology (B.Tech.) — Computer Science

Birla Institute of Applied Sciences

Expected Graduation: 2027 | Currently in 4th Year

AWARDS & ACHIEVEMENTS

2nd Place — NASA Astro Hackathon (2025)

- Contributed to project development and technical implementation as part of a team solving a space-related problem.
- Gained hands-on experience working under time constraints and collaborating within a technical team.
